

Mobile Data service

Delivering optimised, reliable and secure 4G/5G solutions via a high capacity core network to give you the national and international coverage you need.

about the service

In today's fast-paced business world, connectivity is not just important—it is crucial. Businesses require high performance, secure, scalable, and resilient connectivity for offices, machines, and users, wherever they are. The only problem is that fixed line solutions can often be poor quality, late to arrive, or not available at all. For many, this can mean connecting to vital cloud software via a single service, which can fail at any time and bring business productivity to a complete standstill. What companies need is an alternative that can provide both primary and backup connectivity, no matter what or where. Luckily, there are mobile data solutions available that can deliver just that, giving businesses the confidence to operate smoothly and efficiently in today's connected world.

how it works

Our Mobile Data service is the logical step for primary and failover connectivity requirements. We can deliver optimised 4G/5G solutions to you via a high-capacity core network ensuring you get the performance, national and international coverage you need. Our team of experts can supply SIM only services with a static IP address and flexible data tariffs across all cellular carriers. Alternatively, we can also give you a rapid deployment bonded 4G/5G solution which will ensure you get high speed bandwidth on a temporary basis or we can give you a fully managed private network to connect tens of thousands of machines dependent on your requirements. Our Mobile Data service ensures that your coverage connectivity is always secure and reliable.

key benefits

Productivity

Our Mobile Data services uses bonded internet giving you improved performance for internet connectivity, increasing productivity within your organisation.

Collaboration

Utilising our Mobile Data service gives you the ability to share documents, video calls, work remotely with ease allowing you to connect with your teams whenever and wherever you need to.

Monitoring

All of our SIMs have a fixed IP addresses allowing our experts to help you monitor them should you ever need to remotely or through CCTV.

Business continuity

Our Mobile Data service offers private network options and includes built in resilience to ensure business continuity for you with the least downtime as possible.

features

Primary Connection

Our Mobile Data service includes an internet connection if you do not have access to a fixed line service.

Pre-Ethernet

Our team of experts can offer you a pre-ethernet if your fixed line solutions are poor quality, late to arrive, or may be absent entirely.

Failover

In the event of your primary connection failing, we can provide 4G Fixed IP SIMs to give you better resilience as a backup through our Mobile Data service.

Bonded Internet

When utilising our Mobile Data service, we can provide an option of multiple connections to you, including 4G/5G, which can be bonded together to provide you with a faster, more reliable internet connection.

Rental

Our Mobile Data service also has the option to offer you a short-term solution with our 4G/5G Fixed IP SIMs being available on a rental basis.

why you need it

- You're looking for a way to get resilient connectivity for your organisation.
- You want a connectivity solution that will give you primary and back up connectivity no matter where you're located and at all times.
- You want to ensure you are getting the correct connectivity performance for national and international coverage.
- You'd like the option to have bonded 4G/5G solution or a fully managed private network.
- You want to ensure your connectivity and coverage is always secure and reliable.

other useful services

Internet Connectivity & WAN Services

Giving you a reliable WAN (wide area network) that can handle vast amounts of data transfers with optimum connection security.

Microsoft Teams Phone Services

Providing you with a versatile seamless collaborative hub to bridge the gap between your remote teams and office-based teams and all stakeholders.

Cloud Consulting Services

Deploying the expertise of our Cloud Consultants to create, manage and optimise an ideal cloud environment for you, starting with a straightforward Cloud Assessment.
